

Mechanismen der Polarisierung von Parteiensystemen: Ideologische Dynamiken im Kontext von Angebot, Nachfrage und institutionellen Rahmenbedingungen

Der Quellcode des agentenbasierten Simulationsmodells

Wichtig: Der Quellcode ist leicht verändert im Vergleich zum Original, damit die Darstellung im DIN-A4 Format möglich ist. Dies betrifft in erster Linie die Kommentierung. Um den Code technisch nachzuvollziehen, eignet sich die Darstellung in NetLogo wesentlich besser als die hier vorliegende Version im DIN-A4 Format (ebenfalls zum Download verfügbar). Diese Version dient lediglich dem Referenzieren innerhalb der Publikation (Schmitt, Johannes: „Mechanismen der Polarisierung von Parteiensystemen: Ideologische Dynamiken im Kontext von Angebot, Nachfrage und institutionellen Rahmenbedingungen“). Weil Zeilen in NetLogo teilweise nicht als eine Zeile auf DIN A4 darstellbar sind, umfassen eine Spalte mehr als eine Zeile.

Der Quellcode besteht aus sechs einzelnen Dateien:

1. main: Zeile 1 bis 79
2. breeds_and_globals.nls: Zeile 80 bis 154
3. setup.nls: Zeile 155 bis 552
4. functions.nls: Zeile 553 bis 851
5. partie.nls: Zeile 852 bis 1119
6. voters.nls: Zeile 1120 bis 1275
7. elections.nls: Zeile 1276 bis 1289
8. coalitions.nls: Zeile 1290 bis 1547
9. output.nls: Zeile 1548 bis 1587
